# Complete Summary

#### TITLE

Major depressive disorder (MDD): percentage of patients aged 18 years and older with confirmed diagnosis of major depressive disorder who received therapy appropriate to their classification.

# SOURCE(S)

Physician Consortium for Performance Improvement. Clinical performance measures: major depressive disorder. Tools developed by physicians for physicians. Chicago (IL): American Medical Association (AMA); 2003. 6 p.

#### **Brief Abstract**

### **DESCRIPTION**

This measure assesses the percentage of patients aged 18 years and older with confirmed diagnosis of major depressive disorder (MDD) who received therapy appropriate to their classification.

### **RATIONALE**

Major depressive disorder (MDD) is a highly prevalent disorder, which has a significant impact on a person's ability to function. Currently, MDD is the leading cause of disability in the United States. There is evidence that MDD can be comorbid with a variety of medical and mental health conditions, including diabetes, ischemic heart disease, cancer, panic disorder, and alcohol or drug abuse/dependence.

Despite potential risks and established clinical guidelines, recent data suggest that some patients are not being managed optimally for this disease.

#### PRIMARY CLINICAL COMPONENT

Major depressive disorder; treatment; antidepressant medication; psychotherapy; electroconvulsive therapy (ECT)

# DENOMINATOR DESCRIPTION

All patients aged 18 years and older with confirmed diagnosis of major depressive disorder (MDD)

# NUMERATOR DESCRIPTION

# Evidence Supporting the Measure

#### PRIMARY MEASURE DOMAIN

Process

### SECONDARY MEASURE DOMAIN

Not applicable

#### EVIDENCE SUPPORTING THE MEASURE

A clinical practice guideline or other peer-reviewed synthesis of the clinical evidence

One or more research studies published in a National Library of Medicine (NLM) indexed, peer-reviewed journal

# NATIONAL GUIDELINE CLEARINGHOUSE LINK

• <u>Practice guideline for the treatment of patients with major depressive</u> disorder.

# Evidence Supporting Need for the Measure

### NEED FOR THE MEASURE

Wide variation in quality for the performance measured

### EVIDENCE SUPPORTING NEED FOR THE MEASURE

Substance Abuse and Mental Health Services Administration, Office of Applied Studies. National Household Survey on Drug Abuse. 1994-97. Cited by: Healthy People 2010. Leading Health Indicators. Available at:

http://www.health.gov/healthypeople/Document/HTML/uih/uih\_4.htm. Accessed: August 2002.

The state of health care quality, 2002. [internet]. National Committee for Quality Assurance; [cited 2003 Jan 01].

#### State of Use of the Measure

STATE OF USE

Pilot testing

**CURRENT USE** 

# Internal quality improvement

# Application of Measure in its Current Use

# CARE SETTING

Ambulatory Care Community Health Care Managed Care Plans Physician Group Practices/Clinics Rural Health Care

# PROFESSIONALS RESPONSIBLE FOR HEALTH CARE

Advanced Practice Nurses Physician Assistants Physicians

# LOWEST LEVEL OF HEALTH CARE DELIVERY ADDRESSED

Individual Clinicians

### TARGET POPULATION AGE

Age greater than or equal to 18 years

# TARGET POPULATION GENDER

Either male or female

### STRATIFICATION BY VULNERABLE POPULATIONS

Unspecified

#### Characteristics of the Primary Clinical Component

#### INCIDENCE/PREVALENCE

In a given year, approximately 5% of Americans, aged 18 years or older, suffer from depression.

One in six Americans will suffer from major depressive disorder (MDD) at some point during their lives.

Data suggest that psychological treatments and/or medications are 80% effective on individuals with depression; however, in 1997, less than 25% of adults diagnosed with depression received treatment.

The average performance of the National Committee for Quality Assurance accredited health plans for the Health Plan Employer Data & Information Set (HEDIS®) Antidepressant Medication Management Measures is as follows:

- Fifty-seven percent of all patients diagnosed with a new episode of MDD receive antidepressants during the acute phase.
- Of those patients, 40% continue to receive antidepressant medication during the continuation phase.
- About 20% of MDD patients have three or more outpatient follow-up visits with a primary care or mental health practitioner.

#### EVIDENCE FOR INCIDENCE/PREVALENCE

Davidson JR, Meltzer-Brody SE. The underrecognition and undertreatment of depression: what is the breadth and depth of the problem. J Clin Psychiatry 1999; 60 Suppl 7:4-9; discussion 10-1. [34 references] <a href="PubMed">PubMed</a>

### ASSOCIATION WITH VULNERABLE POPULATIONS

Unspecified

#### **BURDEN OF ILLNESS**

In the United States, major depressive disorder (MDD) is the cause of more than two-thirds of all suicides each year.

# EVIDENCE FOR BURDEN OF ILLNESS

# DESCRIPTION OF CASE FINDING

All patients aged 18 years and older with confirmed diagnosis of major depressive disorder (MDD)

#### DENOMINATOR SAMPLING FRAME

Patients associated with provider

# DENOMINATOR (INDEX) EVENT

Clinical Condition

#### DENOMINATOR INCLUSIONS/EXCLUSIONS

# Inclusions

All patients aged 18 years and older with confirmed diagnosis of major depressive disorder (MDD)

### Exclusions

Documentation that treatment was not indicated; documentation of medical reason(s) for not prescribing treatment (e.g., allergy, drug interaction, contraindication); documentation of patient reason(s) for not prescribing treatment (e.g., economic, social, religious)

### NUMERATOR INCLUSIONS/EXCLUSIONS

Inclusions

Patients who received therapy appropriate to their classification\*

- \*Appropriate therapy for mild major depressive disorder (MDD): antidepressant medication or psychotherapy
- \*Appropriate therapy for moderate MDD: antidepressant medication or combination psychotherapy and antidepressant medication or psychotherapy
- \*Appropriate therapy for severe MDD without psychotic features: antidepressant medication or combination psychotherapy and antidepressant medication
- \*Appropriate therapy for severe MDD with psychotic features: combination antidepressant and antipsychotic medications or electroconvulsive therapy (ECT)

**Exclusions** 

None

### NQMC STATUS

This NQMC summary was completed by ECRI on February 26, 2004. The information was verified by the measure developer on October 6, 2004.

# COPYRIGHT STATEMENT

This Physician Performance Measurement Set (PPMS) was developed by the Physician Consortium for Performance Improvement (The Consortium) to facilitate quality improvement activities by physicians. The performance measures contained in this PPMS are not clinical guidelines and do not establish a standard

of medical care. This PPMS is intended to assist physicians in enhancing quality of care and is not intended for comparing individual physicians to each other or for individual physician accountability by comparing physician performance against the measure or guideline. The Consortium has not tested this PPMS.

This PPMS is subject to review and may be revised or rescinded at any time by The Consortium. The PPMS may not be altered without the prior written approval of The Consortium. A PPMS developed by The Consortium, while copyrighted, can be reproduced and distributed, without modification, for noncommercial purposes. Any other use is subject to the approval of The Consortium. Neither The Consortium nor its members shall be responsible for any use of this PPMS. Clinical measures and data are being provided in accordance with the Data Rights Agreement between the Centers for Medicare & Medicaid Services and the American Medical Association.
